

NFC-VCARD

NFC21

INSTRUCTION TO

- 1 scan
- 2 activate
- 3 save

1. Hold the NFC vCard against the back of the smartphone:

- 🍏 In the upper range
- 🌐 In the upper to middle range (depending on the manufacturer)

2. NFC scan successful: 😊

- 🍏 Confirm the NFC scan pop-up and the NFC vCard opens.
- 🌐 The NFC vCard opens automatically or you are asked for the browser.

3. NFC scan not successful: Activate NFC mode of the smartphone.

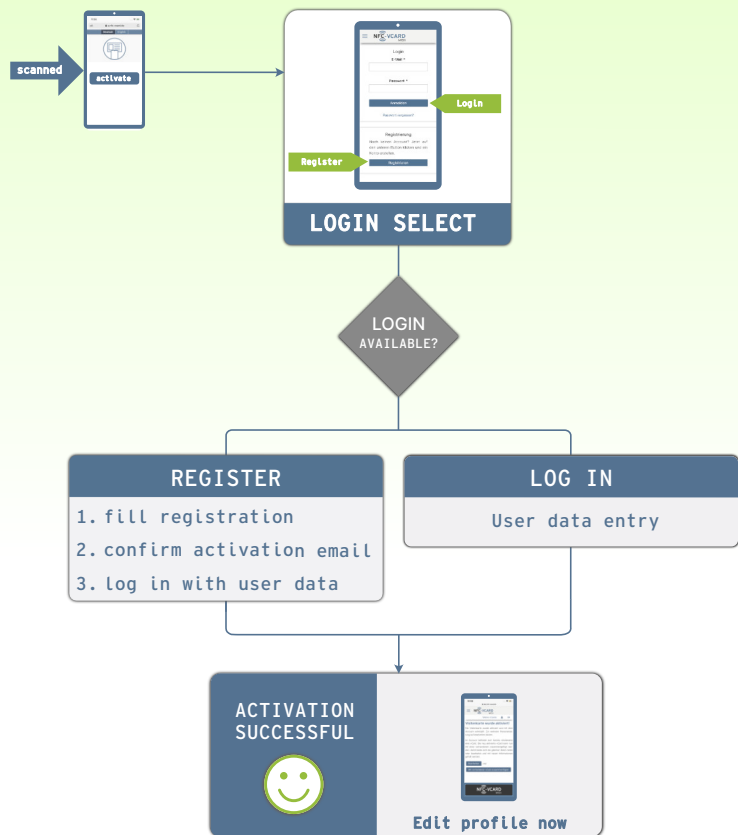

- 🍏 iPhones 7-X: NFC app required. In settings: → 🟢 add to control center. → Open Control Center and launch NFC.

From iPhone Xs: NFC integrated by default / no additional app required.

- 🌐 Search for "NFC" in the device's search function and activate it.

4. Repeat the NFC scan:

Return to step 1 and follow the listed handling instructions.

As the **owner**, you must first link the NFC vCard to your account by activating it. Once Linked, you can enter all the data you want and update it at any time.

The NFC-vCard is now active and ready for use!

Any **new contact** of yours will get your NFC vCard profile displayed on the smartphone by scanning it. To add it to the device's address book, it can simply be ^{scanned} downloaded and saved. This way the contact remains permanently stored!
